KWOLIN ANTISTATIC POWDER COATINGS OFFER THE FOLLOWING ADVANTAGES

- Excellent antistatic characteristics: Can maintain stable antistatic performance in industrial applications over the long term without dissipating due to wear.
- Environmentally friendly: The antistatic powder coatings do not contain organic solvents and pose issues with volatile organic compounds (VOCs). They reduce carbon emissions and meet environmental requirements.
- Excellent protection: Antistatic powder coatings form a uniform and hardened layer on the surface of objects through electrostatic spraying and high-temperature baking, providing scratch resistance, impact resistance, and corrosion resistance.

We can provide a small quantity of stocked black (RAL9005) and light gray (RAL7035) powder samples for you to confirm the effect. Additionally, we can customize designs based on your requirements for color, pattern, gloss, and different resin systems while imparting antistatic properties.

國麗抗靜電粉末塗料具有以下優勢

- 優異的抗靜電特性：工業應用中能夠長期穩定地保持抗靜電性能，不因磨耗而消散。
- 環保無污染：不含有機溶劑，無揮發性有機化合物(VOCs)的問題，降低碳排放量，符合環保要求。
- 保護性優良：通過靜電噴塗及高溫烘烤，在物品表面形成均勻的硬化塗層，具備耐刮磨、耐衝擊、抗腐蝕的性能。

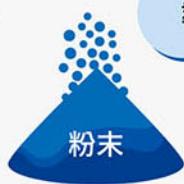

我們可提供少量在庫品黑色(RAL9005)及淺灰色(RAL7035)樣粉供您確認效果，亦可根據您所需求的顏色、花紋、光澤等不同樹脂體系為您客製化設計，並賦予抗靜電性能。

TECHNICAL INFORMATION 抗靜電粉末塗料原理

By uniformly dispersing conductive particles in powder coatings, a conductive layer is formed when applied to the workpiece. This layer disperses charges across the entire surface or substrate, preventing the accumulation of electrons on the object's surface and reducing static accumulation and discharge risks.

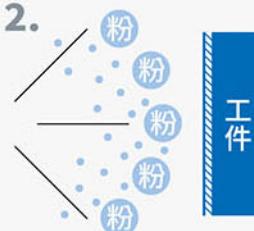

透過導電粒子均勻分散於粉末塗料中，再塗裝於工件上，形成一個導電塗層，可將電荷分散到整個表面或基底材中，防止電子在物體表面累積，從而減少靜電的累積和放電風險。

REPORTS DEMONSTRATION

According to ASTM D257-14 verified by SGS, KwoLin ATS Light Gray Antistatic Powder Coating owns extremely excellent antistatic properties.

The lower the surface resistivity, the better the antistatic performance. Different industries and applications may require different surface resistivity levels for antistatic products:

- General static-sensitive products: Typically between 10^9 and 10^{12} Ω/\square .
- Medical equipment: Typically between 10^6 and 10^{11} Ω/\square .
- Electronic components, semiconductor manufacturing, electronic assembly, and antistatic flooring: Have high sensitivity to static and usually require lower surface resistivity, typically between 10^4 and 10^9 Ω/\square .
